Yochana IT Solutions Inc.

12 Elliot Street East, Windsor, Ontario, N9A1C2, Canada

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Software Programmer position at Yochana IT Solutions Inc., as advertised. As an M.S. Computer Science student specializing in full-stack and AI-powered systems, I am particularly drawn to Yochana IT's focus on developing and enhancing cloud-based software features for client projects, which aligns perfectly with my expertise in scalable backend architectures and modern web application development.

My experience includes engineering full-stack applications using Java Spring Boot and React, such as the Blog Platform where I developed secure JWT-based authentication and role-based access control, and designed RESTful APIs with a PostgreSQL schema. Furthermore, in my AI Resume Tailoring Platform project, I engineered a full-stack FastAPI and React application with a single-pass Gemini pipeline, significantly cutting API rate-limit exposure by 50% and building a real-time SSE streaming pipeline for accurate inference-time feedback.

I have hands-on experience with Docker for containerization, as demonstrated in my Research Assistant role where I containerized prototypes and integrated an SQL database. My proficiency extends to designing modular React applications, implementing secure authentication workflows, and developing reusable interface components, all of which are directly applicable to the duties outlined for this role.

I am confident that my strong technical background in Java Spring Boot, React, and API integration, combined with my collaborative approach to software development, makes me a valuable asset to your team. I am eager to contribute to Yochana IT's innovative projects and would welcome the opportunity to discuss how my skills and experience can benefit your organization.

Sincerely,

Muhammad Umar Khan
