Scotiabank

Canada : Ontario : Toronto

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Software Engineer position within Scotiabank's Derivatives Technology Team, as advertised. As an M.S. Computer Science student specializing in full-stack and AI-driven systems, I am particularly drawn to this opportunity to contribute to the exciting world of Derivatives/Capital markets and leverage my backend development expertise to boost the capabilities of trading and service platforms.

My experience in building scalable backend architectures and REST APIs, particularly with Java and Python, aligns directly with the core requirements of this role. For instance, in my AutoOps AI project, I developed a full-stack AI document processing platform with an ASP.NET Core REST API, JWT authentication, and Entity Framework Core, demonstrating proficiency in designing and deploying robust backend solutions. Furthermore, my Blog Platform project involved deploying a full-stack application on AWS using Elastic Beanstalk and RDS PostgreSQL, implementing JWT-based authentication with role-based access control, showcasing my ability to deliver enterprise-grade applications.

I am proficient in SQL and various databases, including PostgreSQL and Snowflake, which I utilized to design and integrate data workflows in my Research Assistant role. My hands-on experience with Docker for containerization and AWS for cloud deployment, as seen in both my AutoOps AI and Blog Platform projects, would be a valuable asset to your team's focus on continuous learning and leveraging fresh technologies.

I am eager to apply my strong technical and engineering mindset to develop innovative solutions for Scotiabank's Derivatives Technology Team. I am confident that my skills and passion for problem-solving make me a strong candidate for this role, and I would welcome the opportunity to discuss how my contributions can benefit your team.

Sincerely,

Muhammad Umar Khan
