Dear Hiring Manager,

I am writing to express my keen interest in a Software Engineer or Full-Stack Developer role within your organization. As an M.S. Computer Science student specializing in full-stack and AI-driven systems, I am eager to leverage my expertise in building scalable backend architectures and integrating advanced AI functionalities to contribute to innovative projects.

My experience includes developing a full-stack AI document processing platform, AutoOps AI, where I built an ASP.NET Core REST API with JWT authentication and designed a Redis-backed Celery worker pipeline for document processing, significantly enhancing efficiency. Additionally, I deployed a full-stack blog platform on AWS, implementing JWT-based authentication with role-based access control and ensuring unified HTTPS delivery through CloudFront.

I have also developed an AI Resume Tailoring Platform using React, FastAPI, and the Google Gemini API, which features a single-pass LLM pipeline for keyword extraction and ATS optimization, reducing API calls by 50%. This project also included a real-time SSE streaming pipeline for live backend progress events and a 5-metric ATS scoring engine for actionable improvement insights.

My comprehensive background in full-stack development, AI integration, and scalable system design aligns well with the demands of modern software engineering roles. I am confident that my technical skills and project experience would be a valuable asset to your team and would welcome the opportunity to discuss how I can contribute to your company's success.

Sincerely,

Muhammad Umar Khan
