custom software consultancy

Dear Hiring Manager,

I am writing to express my keen interest in the Full-time Developer position at your custom software consultancy. As an M.S. Computer Science student with a specialization in full-stack and AI-driven systems, I am particularly drawn to your structured, PM-led delivery model and the emphasis on predictable execution and clear ownership, which aligns perfectly with my approach to software development.

My experience as a Research Assistant at the University of Windsor involved working with existing systems, where I developed a Python-based image segmentation pipeline and integrated SQL-based data workflows with Snowflake, demonstrating my ability to implement features within established frameworks. Furthermore, in my AutoOps AI project, I built a full-stack AI document processing platform with an ASP.NET Core REST API and PostgreSQL backend, containerizing the multi-service architecture using Docker Compose and deploying it to Railway and Vercel, showcasing my proficiency in delivering reliable software in production environments.

I possess strong working knowledge of JavaScript, SQL, and modern frameworks like React and FastAPI, which are highly relevant to your requirements. My experience with Git-based workflows and code reviews, as demonstrated through my project deployments and collaborative work, ensures I can seamlessly integrate into your team's development processes and contribute to maintaining consistency across projects.

I am confident that my execution-focused approach, combined with my technical skills and commitment to delivering high-quality, maintainable code, would make me a valuable asset to your team. I would welcome the opportunity to discuss how my background aligns with your needs and contribute to building and maintaining production systems for your clients.

Sincerely,

Muhammad Umar Khan
